Easily remove & separate the leaves and debris from your mulch beds. Gives you control of what you want to blow!

INSTALLATION INSTRUCTIONS

- 1) Attach Stretch Band to nozzle so the **Eyelets are situated on the SIDES of the nozzle**, about 1/2" away from the nozzle tip (see image below). **One at a time**, flip over Eyelets, remove backing and stick to nozzle.
- 2) **Grasp the Wire Bracket near it's bottom angles** and firmly bend it's legs inward or outward as needed so that the leg width is about 3/4 the size of the nozzle. Spring open legs and insert them into Eyelets.
- 3) Clean nozzle top with a non-residue cleaner. Flip LeafWHIP onto the top of nozzle to determine where to apply the Touch Fastener Dot. Stick Dot to nozzle top. If dot falls off nozzle, reapply with a Cyanoacrylate glue

***ALTERNATIVE INSTALLATION:** If the Stretch Band is too small or too large for the nozzle, attach the Wire Bracket directly to the nozzle by drilling two opposing 1/8" holes on each side of the nozzle.

Avoid folding or creasing the LeafWHIP

EASY TO USE!

Simply band & clip to your leaf blower. Air-driven mini-whips work like fingers to help remove "just" the unwanted materials.

Virtually eliminates mulch blowout!

DOES MORE!

Helps dislodge wet leaves stuck in grass, or on decks & driveways.

OPERATING INSTRUCTIONS

CAUTION Always wear ANSI approved safety glasses when using or operating this device.

- 1) Operate blower at **LOW speeds**. The LeafWHIP will oscillate up & down.

- 2) Hold the blower between a 20 to 45 degree angle with respect to the ground.

3) Keep the tips of the "mini-whips" parallel to the ground, about 1-2 inches above the mulch. Now, move the LeafWHIP in a side-to-side repeated motion while slowly moving it forward. The leaves will be whisked away! Continue moving it forward to direct the leaves out of your mulch bed. Occasionally & briefly allow the "mini-whips" to contact the leaves to help dislodge them as needed.

NOTE: It is normal for some mulch to get blown out with the leaves due to the mulch's composition and age, your blower speeds, as well as operator proficiency.

- 4) To help dislodge wet stuck leaves from grass, decks or driveways, or to break-up lightly compacted soils, operate the blower at its **MAXIMUM speed** and allow the "mini-whips" to contact the materials.

CONVENIENT!

Swings-up and stores on nozzle for easy access.

FOR *ANY LEAF BLOWER WITH 2 SPEEDS OR MORE.

* For best results use on leaf blowers having a fully variable speed control.

For routine maintenance of
landscape beds having wood,
rubber, shell or other mulches.

LeafWHIP, LLC Sarasota, FL

Ever try blowing, raking or vacuuming leaves & debris out of your mulch? LeafWHIP makes this troublesome task much easier & faster so you can keep your landscaping looking clean and fresh year round. LeafWHIP puts you in control of what you want to blow and virtually eliminates mulch disturbance and blowout!

BLOW OUT THE LEAVES...NOT YOUR MULCH!TM

Use it at ***LOW** blower speeds and move it side-to-side slightly above your mulch. It's air-driven mini-whips will gently oscillate up & down and work like tiny fingers to help you easily strip and blow the dead fallen leaves & debris out of your mulch.

If you have a high-power/high-output blower you can use LeafWHIP to help dislodge wet leaves stuck in grass, or on decks and driveways. Just run your blower at ***HIGH** speed and bring the mini-whips in direct contact with the wet leaves. LeafWHIP converts air into powerful kinetic striking energy!

*** FOR BEST RESULTS USE ON ANY BLOWER HAVING A FULLY VARIABLE SPEED CONTROL or THROTTLE.**

CAUTION:

Always wear ANSI approved safety glasses when using this device.
