HOW TO USE C-BITES

ATTACHING C-BITES TO STAKE

REMOVING C-BITES FROM STAKE

C-BITES can connect to each other in dozens of ways. They're also durable and reusable.

BUILDING A CAGE

The dovetail slot should be empty for snapping C-BITE to stake. Always snap C-BITE to stake before you connect another C-BITE to the dovetail slot.

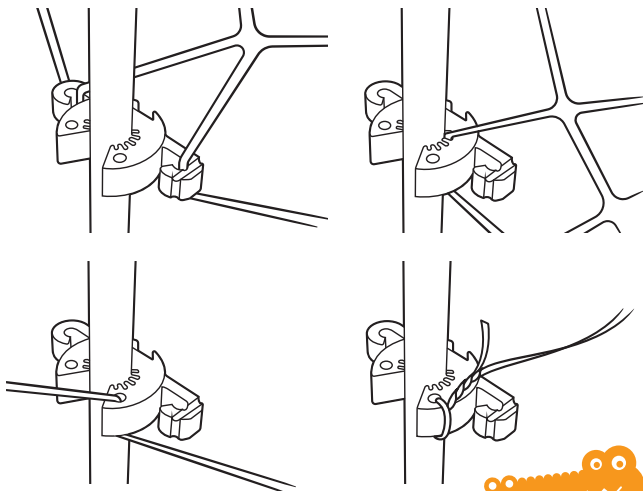

Attach all contact points and then adjust to straighten.

It's easy to expand and raise the cross members to accommodate growth. Simply push on both hooks in the direction you want to adjust!

Remove tight C-BITE connections by "walking" the parts back and forth. Forcing them could cause injury.

SECURING NETTING, TWIST TIES OR CORDS

Use the holes and hooks as adjustable plant tie anchors.

The hooks are slightly different sizes and are also very grabby. Use them on bamboo, parachute or nylon cord, hog wire and fencing.

Safety first! Supervise and encourage C-BITE play of children ages 3 to 8. Wear hand and eye protection when working with metal stakes.
